

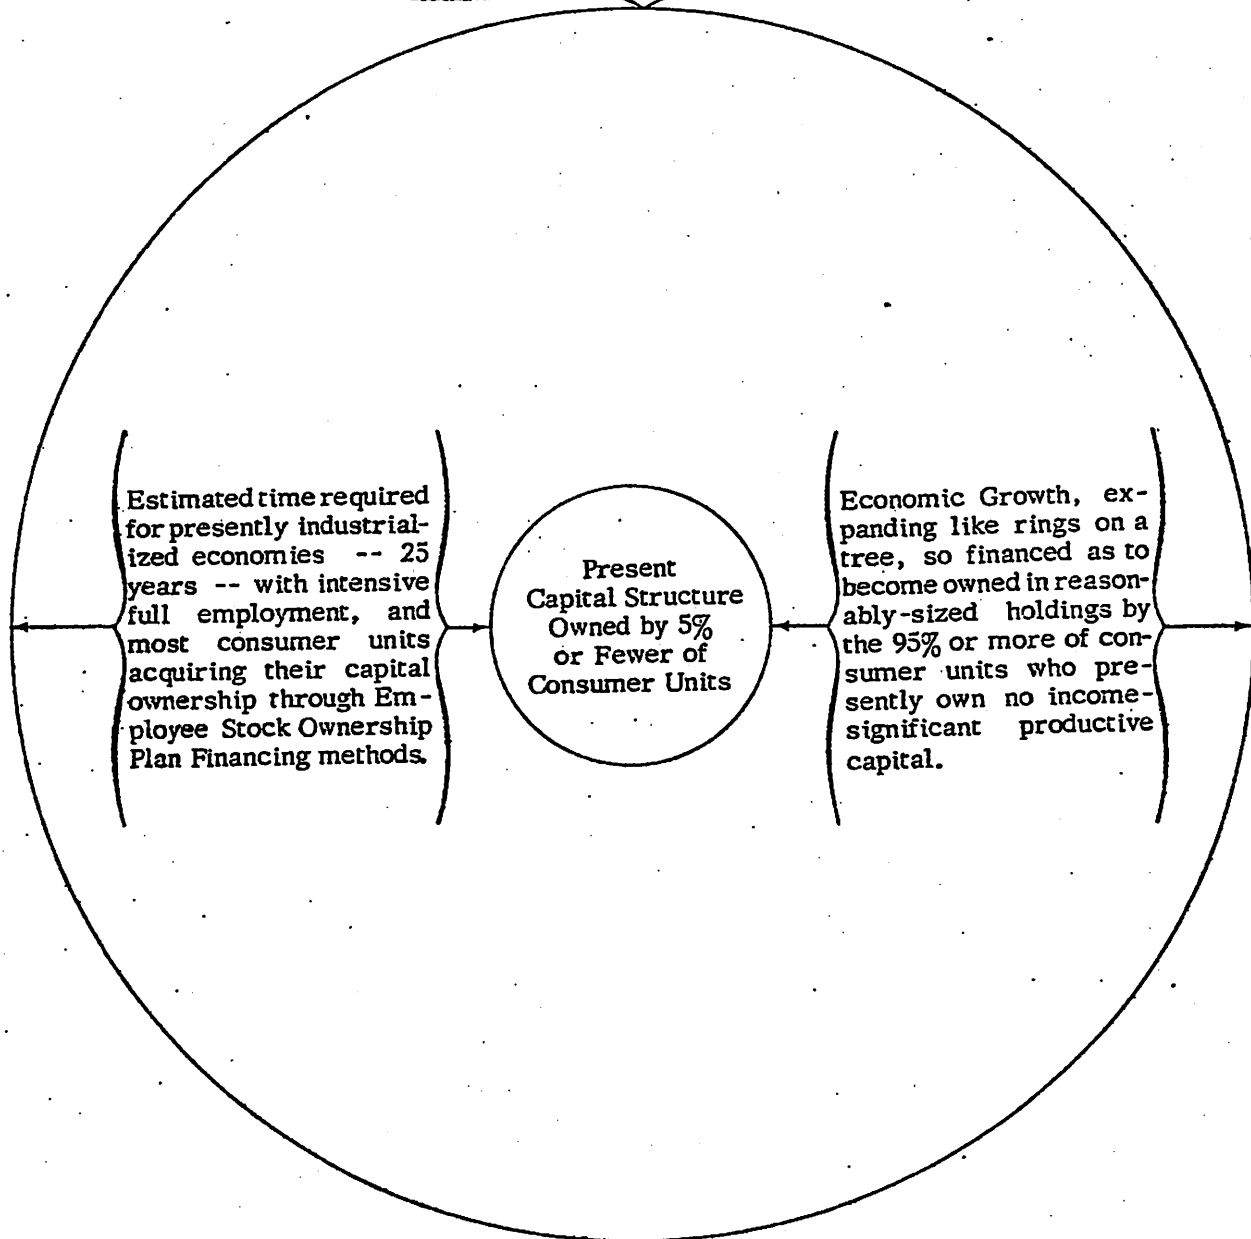

CHART V

Financing Economic Growth through Techniques Derived from Two-Factor Economics Protects Private Ownership of Existing Capital, Enables Present Non-Owners of Capital to Acquire Viable Holdings Representing both Economic Growth and Normal Ownership Transfers of Existing Capital, through the Use of Non-Recourse Credit, Using the Self-Liquidating Logic of Business Finance so that the Capital Pays for Itself. Full Employment for the Intermediate Term (25 Years) and Gentle Deflation Would Result, as Would a Broadly-Owned Capital Base. The Objective Can Be Represented as Follows:

Capital Structure of a Second Economy Required to Provide a High General Standard of Living for all Consumers and Full Protection of the Environment.¹

¹ For the U.S., this would require, without inflation, an increase in output capacity of the Magnitude of 7 to 12 times on a per capita basis.
